DETAILED ACTION

1. Claims 1-22 are allowed.

2. The following is the Examiner's statement of reasons for allowance:

The prior art of record does not disclose or suggest the following in combination with the remaining limitations of the claims:

A current source circuit adapted to provide at an output an output current defined by an average of ratios of measurement currents, wherein the first term of each ratio is defined by a selected one of the plurality of current sources and the second term of each ratio is defined by only the remaining current sources of the plurality of current sources (see independent claim 1).

A temperature measurement circuit comprising a plurality of equivalent current sources, wherein an applied current is provided by a ratio of the current sources, wherein the first term of the ratio is provided by a selected one of the plurality of current sources and the second term of the ratio is provided by only the remaining current sources of the plurality of current sources (see independent claim 2).

A temperature sensor chip, wherein the ratio is defined by a first term equivalent to one of the current sources of the array and a second term equivalent to the remainder of the current sources of the array (see independent claim 20).

A method of sensing and measuring temperature on a chip, wherein the ratio is defined by a first term equivalent to one of the current sources of the array and a second term equivalent to the remainder of the current sources of the array (see independent claim 22). Application/Control Number: 10/705,469
